

Precision is the key to success - customised profile sections from the industry specialists

The agile approach

We are able, thanks to our dynamic corporate structure, to respond quickly and flexibly to the needs of the market.

Keeping one step ahead

The company voestalpine Präzisionsprofil GmbH is part of a multinational group that operates more than 360 production and distribution organisations in more than 60 different countries and on all the world's continents. The group is a world leader in the supply of high-end, customer-specific products and solutions that involve the use of top-quality steel in advanced technological applications.

With annual turnover of EUR 8.6 billion and workforce of almost 40,000 employees, the group is Europe's number-one manufacturer of high-quality strip, wire, rails and special tubes and profile sections, while occupying one of the world's top positions in the supply of railway-points technology and special stainless steels. voestalpine is at the same time one of Europe's leading suppliers to the automotive and vehicle component sectors.

With annual investment of over EUR 100 million in research and development, voestalpine is one of the most innovative companies in its sector. For all these reasons, our customers find that we are one step ahead in many respects.

We are the specialists

As a worldwide association of independent specialists, we offer our customers all the benefits – from a single source – that come from being able to have the right people and skills for each project, with all the market advantages that this entails.

Our positioning

voestalpine Präzisionsprofil GmbH manufactures high-quality steel products. We are specialists in the supply of cold-rolled, open profile sections, and concentrate our attention on the manufacturing industry and the development of special profile sections for various sectors within it.

Our accent on reliability means that we regard our customers' challenges as if they were our own. With our expertise and absolute commitment to developing our outstanding approach, we deal with the day-to-day challenge of turning apparently-intractable problems into usable solutions for our customers.

Precision-engineered profile sections with the “Made in Germany” seal of quality

Customers benefit from our long years of experience when it comes to the development of solutions tailor-made to meet their needs. Our continuously-expanding archives contain details of some 4.000 different profile sections, all ready to be called up for use at short notice. What this means in practice: The whole process, from exploratory talks, product development and toolmaking in our own workshop, to production, finishing and final delivery, is subject to continuous daily checks and evaluations. There is nothing “off the shelf” in what we do. We create each profile section according to the needs and precise production specifications of the customer concerned.

Quality in conformity with DIN ISO 9001 and TS 16949

Our in-house production facilities include a full range of the latest mechanical-engineering equipment, which allows us to produce profile sections that completely fulfil even the most complex requirements. We supply reproducible quality on the basis of the zero-fault principle, in conformity with the exacting standards of the automotive industry.

We drive development in the sector

Always open to new concepts, we follow a constant quest to seek out visionary ideas that go well beyond what has been tried before. Our product development and processes are characterised by their highly imaginative approach. And we are continuously striving to improve our processes even further.

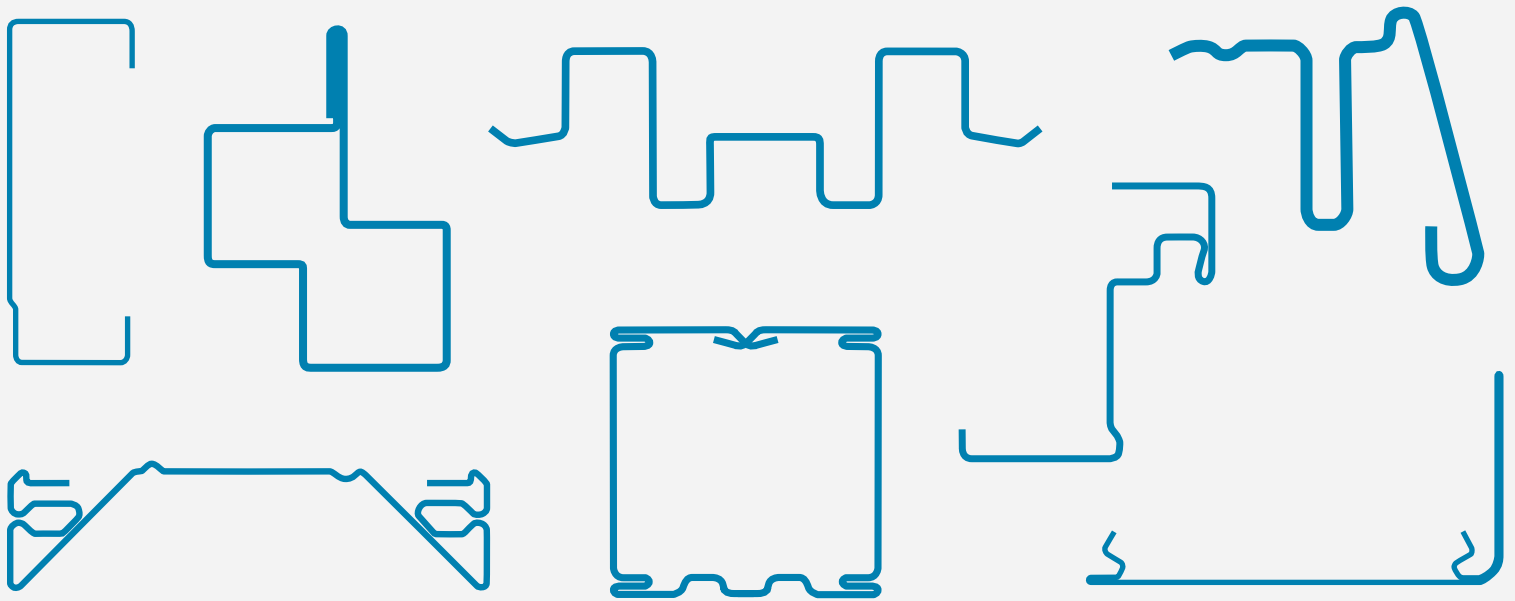

You need to swim against the current to reach the source

This wise piece of advice neatly describes the daily challenge that we face. We seek out new solutions for our customers on a day-to-day basis. Our product-development team is by no means limited to what goes on at the company headquarters on the outskirts of Cologne (Germany), but benefits from the many clever and creative minds that contribute within the voestalpine group as a whole. Our potential lies in our individual operations, which are never far from actual production conditions or our customers. At voestalpine, product development always matches the markets.

Our success proves that our approach is right

This unique “voestalpine Approach” is what has allowed us to cut considerably our time-to-market schedules and create many innovative products with an excellent placement in the sector. And we know that technological leadership brings certain obligations. It is precisely for this reason that we invest proportionally more in the development of our products and processes. The outcome is progress for our customers and us alike – resulting in a win-win situation for all concerned.
